Socioeconomic and Agronomic Survey of Climbing Bean Growers in Guatemalan Highlands, 2015

Overview

Identification	Guatemala2015survey
-----------------------	---------------------

Abstract

To enhance the productivity of beans targeted for the milpa (intercropping) system, the Legume Innovation Lab initiated a project focused on the genetic improvement of Middle-American climbing beans for Guatemala, a collaboration between the bean breeding program at North Dakota State University (NDSU) and the Instituto de Ciencia y Tecnologia Agricola (ICTA). Given the lack of information about this production system, a farm household survey representative of the altiplano region (a.k.a. western highlands) of Guatemala was conducted in 2015 in five departments in this region. The objectives of this survey was to gain a better understanding of the socio-economic status and varietal needs among bean producers within the context of intercropping systems, which could be used as input in the bean breeding program's efforts to develop improved germplasm with better agronomic performance.

Unit of Analysis	Households
-------------------------	------------

Scope & Coverage

Countries	Guatemala
------------------	-----------

Geographic Coverage

The departments of Quiché, Huehuetenango, San Marcos, Chimaltenango and Quetzaltenango

Sampling

Sampling Procedure

See the sampling procedure described in: DeYoung, David J., Byron Reyes, Juan Osorno, Gustavo Mejia, Julio Cesar Villatoro, and Mywish K. Maredia. 2017. An Overview of Bean Production Practices, Varietal Preferences, and Consumption Patterns in the Milpa System of the Guatemalan Highlands: Results of a Farm Household Survey. Staff Paper 2017-08. East Lansing: Michigan State University Department of Agricultural, Food, and Resource Economics.

Weighting

Data set includes a sampling weight variable

Files Description

Dataset contains 3 file(s)
